Question 1
Correct
Marked out of 1.00

P Flag question

Given a string,  $\mathbf{s}$ , consisting of alphabets and digits, find the frequency of each digit in the given string.

# Input Format

The first line contains a string, **num** which is the given number.

### Constraints

## 1 ≤ len(num) ≤ 1000

All the elements of num are made of English alphabets and digits.

## **Output Format**

Print ten space-separated integers in a single line denoting the frequency of each digit from  ${\bf 0}$  to  ${\bf 9}$ .

## Sample Input 0

a11472o5t6

## Sample Output 0

0210111100

# Explanation 0

In the given string:

- · 1 occurs two times.
- 2, 4, 5, 6 and 7 occur one time each.

The remaining digits 0, 3, 8 and 9 don't occur at all.

Answer: (penalty regime: 0 %)

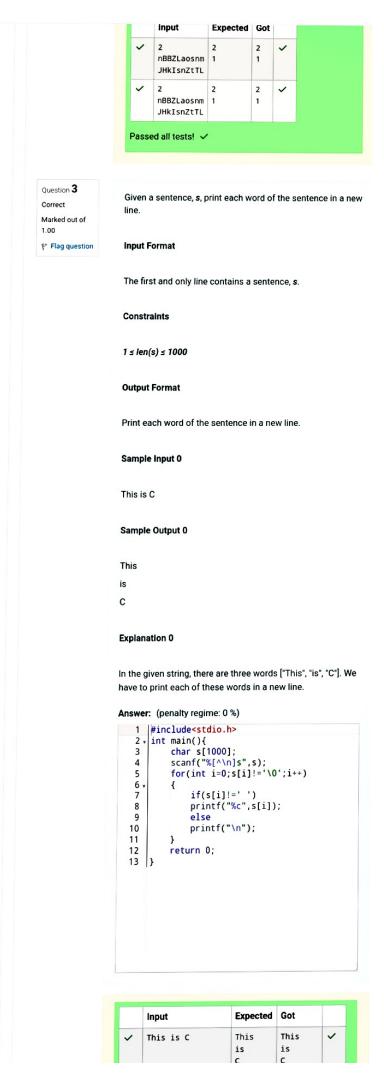

```
1 |#include<stdio.h>
 2 - int main(){
         char str[1000];
scanf("%s",str);
int hash[10]={0,0,0,0,0,0,0,0,0,0,0,0,};
 3
         int temp
         for(int i=0;str[i]!='\0';i++)
 8 .
 9
              temp=str[i]-'0';
10
              if(temp<=9&&temp>=0)
11
12
                   hash[temp]++;
13
14
15
         for(int i=0;i<=9;i++)
16 .
17
              printf("%d ",hash[i]);
18
19
         return 0;
20 }
```

Question 2 Today, Monk went for a walk in a garden. There are many Correct trees in the garden and each tree has an English alphabet on Marked out of it. While Monk was walking, he noticed that all trees with 1.00 vowels on it are not in good state. He decided to take care of P Flag question them. So, he asked you to tell him the count of such trees in the garden. Note: The following letters are vowels: 'A', 'E', 'I', 'O', 'U', 'a', 'e', "i', 'o' and 'u'. Input: The first line consists of an integer T denoting the number of test cases. Each test case consists of only one string, each character of string denoting the alphabet (may be lowercase or uppercase) on a tree in the garden. Output: For each test case, print the count in a new line. Constraints: 1≤T≤10 1 ≤ length of string ≤ 10<sup>5</sup> SAMPLE INPUT nBBZLaosnm JHklsnZtTL SAMPLE OUTPUT 2 Explanation In test case 1, a and o are the only vowels. So, count=2 Answer: (penalty regime: 0 %) 1 #include<stdio.h> int main(){ int t; scanf("%d",&t); 3 while(t--){
 char str[100000]; int count=0;
scanf("%s",str); for(int i=0;str[i]!='\0';i++) 9 10 • 11 char c=str[i]; if((c=='a')||(c=='e')||(c=='i 12 13 count++; 14 15 printf("%d\n",count); 16 17 return 0; 18

Input

**Expected Got** 

Correct Marked out of 1.00 You are given two strings, a and b, separated by a new line. P Flag question Each string will consist of lower case Latin characters ('a'-**Output Format** In the first line print two space-separated integers, representing the length of a and b respectively. In the second line print the string produced by concatenating a and b (a + b). In the third line print two strings separated by a space,  ${\bf a}^\prime$  and  ${m b}'$ .  ${m a}'$  and  ${m b}'$  are the same as  ${m a}$  and  ${m b}$ , respectively, except that their first characters are swapped. Sample Input abcd Sample Output 42 abcdef ebcd af Explanation a = "abcd" b = "ef" |a| = 4 |b| = 2a + b = "abcdef" a' = "ebcd" b' = "af" Answer: (penalty regime: 0 %) |#include<stdio.h> int main(){
 char str1[10],str2[10],t; 3 int i=0;int j=0;
int count1=0;int count2=0; 4 6 scanf("%s",str1); scanf("%s",str2); 8 while(str1[i]!='\0') 9 10 count1++; 11 i++; 12 13 while(str2[j]!='\0') 14 15 count2++; 16 17 printf("%d %d\n",count1,count2);
printf("%s%s\n",str1,str2); 18 19 20 21 t=str1[0]; str1[0]=str2[0]; 22 str2[0]=t; printf("%s %s",str1,str2); 23 24 return 0; 25 } Input Expected Got abcd 4 2 4 2 abcdef abcdef ebcd af ebcd af
